Below is assuming the new fork of dcs-bios to support a customer serial interface.

<https://github.com/DCS-Skunkworks/dcs-bios-arduino-library>

Google Gemini is making up the ability to define DCSBIOS_CUSTOM_SERIAL and implement the virtual function that's missing.

But it can be created in dcs-bios.h by copying the normal serial implementation in DCSBIOS_DEFAULT_SERIAL, making an

```
#ifdef DCSBIOS_CUSTOM_SERIAL
```

```
and using CompositeSerial.write() instead.
```
